ABOUT ME

Dedicated Computer Science undergraduate passionate about building practical, user-focused software. I enjoy working across the full stack designing responsive interfaces in React, developing backend services through the integration of REST APIs.

I also have experience applying machine learning to real-world datasets, which strengthened my problem-solving and analytical thinking. I'm currently seeking a full-stack development internship where I can contribute to production-level applications, collaborate with experienced engineers, and continue improving my software design and engineering practices.

EDUCATION

University of Westminister	BSc Computer Science Modules - Database Management, Java Object Oriented Programming, Web Development and Design, Machine Learning and Data Mining ,Server Side Web Development, Client Server Architectures	2024 - Current
Informatics Institute Of Technology	Foundation Certificate of Higher Education Grade - Distinction	2023 - 2024
Vidura College - Colombo	G.C.E. Ordinary Level Examination Results - 8As 1C	2012 - 2022

PROJECTS

Dengue Guard

React JS , Supabase , Express JS, XGBoost

- Led a team to design and develop a dengue breeding site/case reporting and prediction platform integrating machine learning.
- Developed Components and Pages using ReactJS and REST APIs using Express JS on behalf of several core features of the application.
- Trained and developed a machine learning model to forecast future weekly dengue case counts using historical epidemiological and weather data.

Loan Approval and Maximum Eligible Loan Prediction System

Pandas, Sci-kit learn, KNN, Linear Regression

- Built predictive models to assess credit risk and automate loan eligibility for bank clients, aiming to minimize default rates.
- Performed data cleaning, data preprocessing and feature selection on financial datasets to ensure model robustness.
- Developed and optimized classification and regression models to predict both approval status and maximum eligible loan values.

Dengue Guard Landing Page

ReactJS

- Developed a landing page for the DengueGuard project, on behalf of marketing purposes.

Portfolio Website

ReactJS

- Developed a dashboard-style portfolio showcasing projects, skills and as a platform for others to reach me out.

Climate Action

HTML, CSS, JavaScript

- Contributed in developing a website covering information on SDG 13 - Climate Action.

TECHNICAL SKILLS

- Programming Languages: Python, Java, JavaScript
- Machine Learning: Supervised learning - Classification, Regression
- Project Management Tools: GitHub, Trello
- Web Design and Development: HTML, CSS, PHP, Express JS, React JS
- Database Management: MySQL, MongoDB
- BaaS: Supabase
- Concepts: Object Oriented Programming

SOFT SKILLS

- Leadership
- Team Work
- Adaptability
- Problem Solving
- Time Management

CERTIFICATIONS

- “React Essential Training” by Eve Porcello (Pending)
- “Express Essentials: Build Powerful Web Apps with Node.js” by Jamie Pittman
- “Java Object-Oriented Programming” by Kathryn Hodge

COMPETITIONS

Hult Prize 2026 - Participant

2026/02/21

Hult Prize Foundation

- Got the opportunity to present our AI Powered Health Care platform DengueGuard at the Hult Prize 2026.
- Demonstrated the project's potential to solve pressing healthcare challenges in Sri Lanka through advanced predictive modeling.
